

Sticks and stays for broad spectrum disease control

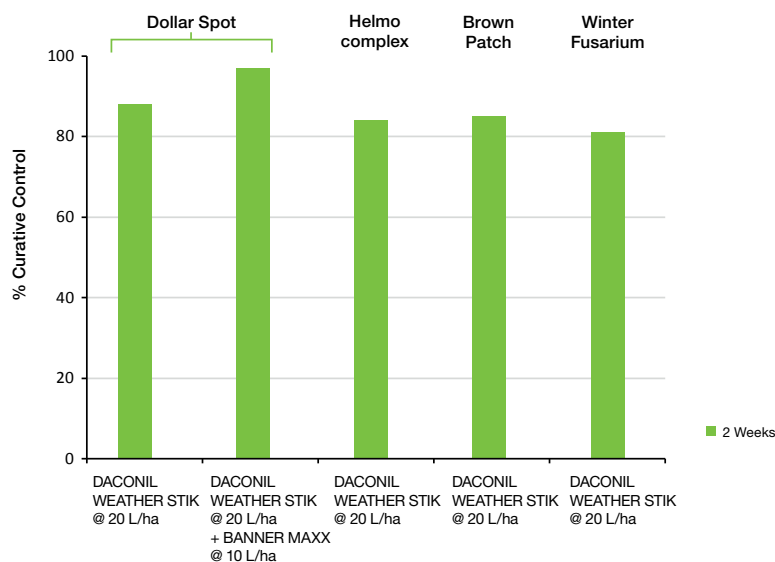

syngenta®

DACONIL WEATHER STIK Turf Fungicide is an excellent choice as the basis of a preventative program.

What DACONIL WEATHER STIK offers you:

- Broad spectrum control of major turf diseases including Dollar Spot, Winter Fusarium, Brown Patch and the Helmo complex
- A fungicide that sticks and stays under tough mowing and irrigation practices
- The option to tank mix with BANNER MAXX or HERITAGE MAXX to achieve systemic and contact action
- Strong resistance management abilities when used in rotation with multi-site products like MEDALLION Turf Fungicide
- High quality suspension concentrate formulation with low odour and non-staining properties

SpraySURE | Accuracy and Performance

To achieve great results, accurate application is important.

Target	Syngenta Nozzle	Optimal Water Rate	Optimal Pressure Range
Leaf and crown	F XC 04 or XC 025	300 to 500 L/ha	2 to 4 bar

The sticking and staying ability combines to ensure effective “stopping power” on leaf surfaces against new infections. The lower rate of 13 L/ha is suitable for use in tank mixtures and preventative programs, whereas the higher rate of 20 L/ha should be considered in early curative situations.

Example: In the case where a disease like Dollar Spot has already caused symptoms (scarring) DACONIL WEATHER STIK could be applied solo at 20 L/ha or as a tank mixed with BANNER MAXX at 5 to 10 L/ha. In curative situations though, the residual will be shorter due to the high population numbers of the pathogen. It would be prudent to follow up with HEADWAY MAXX at 9 L/ha 7 to 10 days later. This approach should stop disease progression and protect new growth for at least for the next 4 to 5 weeks.

Target Diseases	Rate	SpraySure
Brown Patch, Dollar Spot, Helminthosporium Disease, Winter Fusarium	13 to 20 L/ha	F

Refer to the registered label for full details and instructions for use. **F** = Foliar applied **So** = Soil applied **Su** = Surfactant required

Active Ingredient

DACONIL WEATHER STIK contains 720 g/L chlorothalonil, a member of the chloronitrile fungicides

GROUP **M5** FUNGICIDE

Formulation and Packaging

10 L pack size

High quality suspension concentrate (SC) with minimal odour and excellent suspensibility in spray mixtures. Weather Stik Technology ensures excellent residual on leaf, stem and crown surface and a high degree of rainfastness.

DACONIL WEATHER STIK can be tank mixed with BANNER MAXX, HEADWAY MAXX, HERITAGE MAXX and PRIMO MAXX.
