

LEAGUE TURF SEED BLEND

The Perennial Ryegrass Blend when quality, performance and value are essential.

League Blend brings together all the essential qualities required for a premium turf surface e.g. dark green colour, winter activity and quick establishment. Our carefully selected varieties have all performed admirably in the harsh Australian climate.

Key Attributes:

- High wear tolerance for sports turf
- Dark green colour
- Quick establishment
- Excellent turf quality
- Winter active

Uses

League is highly recommended for permanent turf applications, or for winter oversowing of dormant warm season grass.

It can be used for oversowing of golf fairways and tees as it has a dense growth habit and excellent overall turf quality.

Sowing & Establishment

For new sowing, a rate of 3–4kg per 100m² is recommended. For oversowing, a percentage of this rate should be applied proportionate to the amount of existing turf cover. For moderate existing cover, apply at half the new seeding rate.

During sowing activity, a complete starter fertiliser is recommended at label rates to initiate rapid establishment.

Maintenance

League Blend can be mowed as low as 10mm, however the recommended mowing height in most applications is 25mm.

Seasonal application of a balanced NPK fertiliser is recommended to sustain a healthy sward.
