**Maintain - Foliar Complex** is a balanced, organically chelated fertilizer product designed to provide a base of complete nutrition in a foliar product.

**Maintain - Foliar Complex** contains a comprehensive range of all the minerals plants require for strong healthy growth. Phosphorus, Calcium, Magnesium and Boron, need to be maintained within the plant throughout the active stages of plant growth. The addition of Phosphorous as a foliar ensures this crucial element is available to the plant and overcomes any Phosphorous tie-up issues in the soil.

Nitrogen, Potassium and a broad range of trace elements are also included, to ensure that all plant functions are properly supported. Mineral inclusions have been complexed with Fulvic acid and Mannitol to optimise uptake and utilisation to provide the basis for strong plant growth above and below the surface.

Fulvic acid is a natural chelation agent which dramatically improves absorption of nutrients into the plant and the presence of Mannitol provides growth stimulation and aids the movement of nutrients within the plant.

- **Best results will be achieved from regular (usually monthly) applications.**

## Application Rates:

### Turf and General:

Apply as a foliar at 250ml – 500ml per 1000m<sup>2</sup> regularly during the growing season, or at periods of high stress and nutrient demand.

**Dilution.** (minimum dilution 1:100)
